

Crab By Acca2o is an innovative concept of multi_hull boat, born from a very simple idea, and then provide "all service of marina" to the boats that stop in estuaries or in the fields buoy, or in the little or big marina (black version)

Service can range from simple supply of water to the tanks, removal of sewage and wastewater, removal and compaction of solid waste in different ways, aspiration a little or middle gasole and oil on the water .The idea in fact ,is this :
to assist all boaters in need of port services. You may also be a good tool for the service "boat to boat" in the marinas.

At the moment we launched two version of the Crab 75 by Acca2o

- "The White version" is primarily a multi-boat, for the supply of fresh water (tanks 6.000 lt) to the tanks and solid collection
- "The Black version" is primarily designed for the removal of black water, with simultaneous purification of wastewater discharge into the sea transparent certified in Table A (Lloyd's approved) ,as well as the removal of gray water and bilge water, can also be equipped with cranes, hoists, floating garbage collection kits, and other equipment to allow normal maintenance work in marina.

Press section of our website www.acca2o.it, you can find all copies of the articles and editorials, leaving the trade press, that we invite you to read.

Finally, we note that the first unit of the Crab version White took office this summer in the Archipelago of La Maddalena Sardinia (Italy), in agreement with the National Park of La Maddalena, with excellent results.
